Rajiv Gandhi Institute of Technology, Kottayam

An electric vehicle (EV) is a vehicle that uses one or more electric motors or traction motors for propulsion. Charging stations are hard to find for this type of vehicles because, only a small population uses EV. We are developing a mobile Application named "DriveThru" for the Client : VCharge India Private Limited, VCharge LLC UAE.

The basic purpose of DriveThru is to locate EV Charging stations throughout the country. An EV owner can use the app to locate the charging station, charge the vehicle and also pay through the App according to the total unit consumed. Drivethru initial version is available currently in PlayStore.
